*STAIN PROTECTED TIMBER*

## M A I N F E A T U R E S

- Antiblu Select™ treated timber is timber that has been treated with Antiblu Select™ solution.
- Antiblu Select™ is a waterborne formulation based on biodegradable ingredients.
- Does not contain metals or chlorinated phenols, such as PCP (pentachlorophenol) or TCP (trichlorophenol).
- Ensures the value of timber is maintained by providing effective protection against surface mould and sapstain (bluestain) fungi.
- Protection is designed to last throughout the seasoning, storage and transport of timber and is therefore of short duration, typically three months.
- Applied by dipping, spray or deluge to freshly felled timbers.
- Imparts no odour or colour to the treated timber.

STAIN PROTECTED TIMBER

## HANDLING PRECAUTIONS

You should have received the timber with no sign of preservative fluid on the surface. If this is not the case leave it to surface dry under cover, but ventilated, before using it.

When working with timber wear gloves to protect the skin against abrasions and splinters.

Any cuts and abrasions should be protected by a waterproof dressing.

Avoid frequent or prolonged inhalation of sawdust. Wear a dust mask and, whenever possible these operations should be performed outdoors to avoid accumulations of airborne sawdust.

When power-sawing and machining wear goggles to protect the eyes from flying particles.

In order to prevent injury care should be taken when lifting or moving timber.

The same precautions apply to untreated timber.

## PERSONAL HYGIENE

After handling or working with wood all exposed skin should be washed before commencing other activities, especially eating, drinking, smoking or going to the toilet.

If sawdust accumulates on clothes, clean them before reuse. Launder heavily soiled clothes separately from other household wash items.

## END USE CONSIDERATIONS

The function of treatment with ANTIBLU SELECT™ is to provide protection during the seasoning, storage and transport of timber and this is therefore of limited duration, dependant upon conditions of use and timber species.

The timber may be subsequently treated with another wood preservative before being fabricated into a timber article.

ANTIBLU SELECT™ treated wood should not be used in direct contact with food, e.g. food preparation surfaces, or structures or containers for food storage.

## ON-SITE PRECAUTIONS

All sawdust and construction debris should be cleaned up and disposed of after construction.

## WASTE DISPOSAL

Sawdust and shavings from ANTIBLU SELECT™ treated timber must not be used for animal bedding or litter.

ANTIBLU SELECT™ treated wood should not be used for fuel in barbeques, cooking stoves or grates.

**FURTHER INFORMATION** Should you require further information on the use of ANTIBLU SELECT™ treated timber, please contact the Arch Timber Protection Advisory Service at the address below.
